SUMMARY

Senior Backend Engineer with 5+ years architecting and scaling high-throughput distributed systems, now focused on building **LLM gateway and agentic-AI platforms**, production LLM integration, observability, and access control. Proven track record of technical leadership, open-source contribution, and delivering AI systems with quantifiable business impact €247K in measurable cost savings; developer tools adopted by thousands.

WORK EXPERIENCE

Senior Software Engineer | Intelmatix

Nov 2025 – Present

Riyadh, Saudi Arabia

- Architected the LLM gateway and backend for MATIX, a net-new **agentic-AI platform**, the auth, identity, and real-time streaming boundary every LLM interaction routes through across 3 services using **Kotlin, Spring Boot, Go, LiteLLM, and Keycloak**.
- Developed an **agentic AI system** for the Royal Commission that manages and monitors **40k+** vehicles, providing product roadmap planning, business integrations, AI workflow design, and improving response reliability serving **1.8M+ pilgrims** using **Python, FastAPI, LangFlow, LangFuse, Redis, GCP, and Terraform**.
- Owning the backend of **EDIX**, a **multi-tenant AI SaaS** platform spanning **5 microservices** on **AWS ECS**, serving enterprises in the F&B and retail industries using **Spring Boot, Kotlin, and PostgreSQL**.
- Led and contributed to **EDIX platform** and **Kong API Gateway** in **Go**, driving JWT architecture improvements, including resolving a critical per-service subscription-scoping vulnerability and enabling granular access control.
- Collaborating with business leaders and cross-functional teams to ensure solution designs met both strategic objectives and regulatory requirements.

Senior Software Engineer | BMW Group (via eJad)

Jan 2025 – Nov 2025

Cairo, Egypt

- Re-architected the logging service with asynchronous processing and optimized formatting, improving UI responsiveness by **15%** and eliminating **€223K** in performance-related losses using **Java** and **MySQL**.
- Led client meetings, translating business requirements into technical solutions and contributing to feature design and implementation planning.
- Mentored and onboarded **5 engineers**, fostering a collaborative and knowledge-sharing environment.

Software Engineer | BMW Group (via eJad)

Mar 2022 – Dec 2024

Cairo, Egypt

- Engineered a VS Code extension (**Java EE, Xtext, TypeScript**) with IntelliSense/validation for an internal DSL, achieving **2,500+ downloads in the 1st month**.
- Revamped CI/CD workflows for a monorepo of **3,000+ artifacts** using **Ansible, Bazel, and Python** in Agile Scrum.
- Increased SyML DSL **operations per second by 45.4%** for **50k active users** by tuning JVM parameters and GC and integrating virtual threads using **Kotlin, Java, SWT, and JFace**.

Backend Engineer | Lens EDA

Oct 2019 – Feb 2022

Remote (NY, USA)

- Developed zone management features, optimizing SQL queries and WebSocket performance for **real-time** handling of **large-scale chip design datasets**. Stack: **Python, Django, DuckDB**
- Optimized core database SQL queries, cutting execution time and CPU load by **90%**.
- Cut CI E2E test runtime by **75%** by restructuring the test suite, enabling parallel execution, and reducing profiling overhead.

SKILLS

- **Languages:** Python, Java, Kotlin, Go, TypeScript
 - **AI / LLM:** AWS Bedrock, LLM gateways, LiteLLM, Agentic workflows, MCP, Claude Code, LangFlow, LangChain, LangFuse, Flowise, RAG concepts, LLM evaluation
 - **Technologies:** PostgreSQL, MySQL, MongoDB, Spring Boot, FastAPI, Django, AWS, GCP, Docker, RESTful API, Unit Testing, Terraform, Maven, Gradle, Bazel, Redis, Kafka, Ansible, Git, Linux, JIRA, JUnit, Mockito, React
 - **Other:** Utilization of LLMs, Data Structures, Algorithms, OOP, Design Patterns, SDLC, SOLID, TDD, API Integration, Microservices, Serverless Computing
-

EDUCATION

- **B.Sc. Computer Engineering**, Ain Shams University, **Top 10%**, Cairo, Egypt Sep 2015 – Jul 2020

Graduation Project | A+

Designed and built a deep-learning model that converts the source code of Android apps to iOS apps and vice versa with **72% accuracy** using NMT based on Google's **Transformer** model (Python and Keras API).

Participant in ACM, Google Code Jam, IEEE Xtreme, and regional competitive programming contests

PROJECTS

- **Finsync:** Mobile application automating payment management (Spring Boot, Hibernate, JPA, React).
 - **Log4j2:** Contributor to open-source Apache Log4j (Java, Maven).
 - **PongPing:** Automated table tennis scoring system (Python, OpenCV).
 - **CareHub:** Healthcare app for patient record management, appointment booking, and provider discovery (Django, SQL, HTML5, CSS3).
-

PUBLICATIONS

- **Neural Machine-Based Mobile Applications Code Translation**, 2nd Novel Intelligent and Leading Emerging Sciences Conference (NILES) – IEEE, 2020. DOI: 10.1109/NILES50944.2020.9257935
-

LANGUAGES

- **Arabic** (Native) | **English** (Fluent) | **German** (Beginner)
